

SYNCHROS

SYNergies for Cohorts in Health Integrating in the Role of all Stakeholders

Support for Multi-study integrative Research - Access to data across cohorts

Research in personalised medicine or other health disciplines require many data. Ideally, these data represent many participants, different societal groups, and various socio-environmental contexts. This is often more than one cohort study can offer. **To facilitate the use and re-use of data across cohorts, SYNCHROS offers support.** We help researchers to identify suitable cohorts and provide information on how to access and harmonize the data.

How to ... find suitable studies?

Mapping of the landscape of integrated cohorts covering:

- Population cohorts
- Patient cohorts
- Clinical Trials

Information on variables, number and category of participants, study design and institutions

How to ... get access to data?

We provide:

- Links to cohort websites
- Contact details : PIs, cohort coordinators and researchers
- Links to institutional resources and formal requirements for data access requests

How to ... harmonise data?

We help to choose the right approach for standardization, harmonisation or integration -> read our **Strategy Briefs**, available on the website

What else?

Information on analytical approaches to maximise the value of cohort data and Suggestions to deal with legal & ethical issues
